## The Krystal range

For more than 35 years, EDM Imaging has been the trusted partner of healthcare providers for all their medical imaging needs.

EDM is proud to introduce its Krystal product line to reinforce its commitment to **quality, safety, and affordability**. Krystal provides high-quality, cost-effective solutions in the fight against cross-contamination and **improves clinical outcomes** by maximizing the protection available for both patients and healthcare professionals during procedures.

## Krystal protects your patients, your staff and your finances

Patient  
safety

Quality

Krystal products are FDA-cleared and CE-Marked, and they are used by thousands of physicians across the globe.

Through our unique solution-focused approach, the Krystal product line is the go-to for physicians and healthcare staff looking to provide high-quality treatment while maximizing patient care.

Clinical  
outcomes

Safety

Our products have been designed to ensure patients and medical staff are protected from cross-contamination and healthcare-associated infections.

Krystal products are free from potentially harmful components such as parabens and phthalates.

Financial  
sustainability

Cost

We understand that elevating patient care begins with providing affordable treatment that is safe and effective.

Practitioners shouldn't be forced to forgo quality for price, or patient safety for the bottom line. That's why we created Krystal – high-quality infection control solutions at market-leading prices.

## Krystal probe covers General information

Krystal probe covers are crafted to create a physical barrier between the patient and the ultrasound probe, aiming to reduce the risk of cross-contamination.

Manufactured according to EDM's quality standards, these products are trusted by healthcare professionals in Europe, the United States, and beyond for more than three decades.

Krystal probe covers, offered in polyurethane and polyethylene for percutaneous probes and in latex for endocavity probes, are MDR-certified.

SPAULDING Classification	Non-Critical	Semi-Critical	Critical
Description	Contacts intact skin	Contacts mucous membranes or non-intact skin	Enters or contacts sterile tissue or vascular system or bloodstream
Example in ultrasound	Scan across intact skin, skin is not penetrated	Endocavity ultrasound, scan across non-intact skin	CVC insertion, biopsy, surgery
Gel	Non-sterile multiuse or non-sterile single-use (recommended)	Sterile, single-use packet	Sterile, single-use packet
<b>Probe Cover</b>	<b>Not required</b>	<b>Yes, sterile (recommended) or non-sterile (required)</b>	<b>Yes, sterile</b>

# Percutaneous Probe Covers

## Polyethylene kits & covers

Polyethylene probe covers provide an economical sterile solution for ultrasound-guided procedures.

Highly tear-resistant, they ensure optimal protection for both patients and clinicians.

Each sterile kit includes: 1 sterile probe cover, 1 sterile drape, 2 sterile elastic bands, 2 adhesive strips, and 1 sterile 20 g gel packet

# Sterile Probe Covers Kits Polyurethane

Sterile polyurethane and polyethylene probe cover kits are recommended for radiology, anesthesia, and the operating room.

## Krystal's cover

The sterile kits contain :

- 1 polyurethane cover
- 1 sterile drape (30 x 30 cm)
- 1 sterile gel packet (20 ml)
- 2 elastic bands and 2 adhesive strips

## Polyurethane cover kit

Polyurethane probe covers are very high quality, highly tear-resistant, and soft to the touch, for greater patient comfort.

# Polyurethane Probe Covers with adhesive gel

Sterile polyurethane protection kits with integrated adhesive gel are recommended for ultrasound-guided regional anesthesia.

## A simple solution for protecting superficial probes

### BENEFITS

- Time-saving: no need to add gel manually
- No gel residue on the probe
- Reduced artifacts: the integrated adhesive gel conforms perfectly to the probe head
- No latex (0%): eliminates allergy risks

## Covers for superficial probes with adhesive gel on the inside

### The sterile kits contain:

- One cover
- One sterile drape
- One individual 20 ml sterile gel packet
- Two sterile elastic bands and two adhesive strips

# Kits for Ultrasound-guided Regional Anesthesia

## Regional Anesthesia Kits

Complete kits designed to reduce cross-contamination risk and provide clinicians with all components required for regional anesthesia procedures.

The kit contains a sterile polyurethane cover with adhesive gel on the inside, as well as all the medical devices required for regional anesthesia procedures.

STERILE

Ultrasound gel

# Optimal quality Unique formula Ease of use

The Krystal ultrasound and Doppler gel is designed for optimal ultrasonic transmission. Tested and approved for use with all ultrasound probes.

High-viscosity formula and bubble-free manufacturing ensure excellent conductivity.

Hypoallergenic gel with 99% natural ingredients. No dyes, perfumes, or parabens.

A wide range to meet every type of procedure  
Available formats: 5 L cubitainer, 250 ml bottle, 20 ml packet.

## Recommendations for the use of ultrasound gel

### Non-sterile gel

“It is absolutely necessary to discard any opened canister (or 250 ml bottle) at the end of the day, even if it has not been fully used.”

### Sterile gel

“Use sterile gel in individual packaging in the following five specific situations: presence of a recent surgical scar; skin wound; intraoperative ultrasound; puncture and/or biopsy; endo-vaginal and endo-rectal examination.”

Circular letter DH/EM 1 No. 96-479 of February 6, 1996 concerning the safe use of medical devices.

## Sterile Ultrasound Gel – Individual Packaging (20 ml)

Recommended for:

- Endocavity (endovaginal or endorectal) examinations
- Procedures with risk of exposure to body fluids
- Image-guided puncture or biopsy
- Recent surgical scars or open wounds
- Intraoperative ultrasound

The sterile version helps minimize the risk of cross-contamination and ensures patient safety during ultrasound-guided procedures.

The double packaging allows healthcare professionals to easily maintain the sterile field. Individually packed in 20 ml packets, Krystal gel is easy to use, apply, and wipe away.

Ref.	Characteristics	Sterile	Quantity
<b>PC020</b>	Sterile ultrasound gel – 20 ml packet	yes	48/box

## Non-Sterile Ultrasound Gel

Used for the most common procedures on intact skin without infection or pathology. Perfect for non-critical examinations.

Surgical equipment drapes

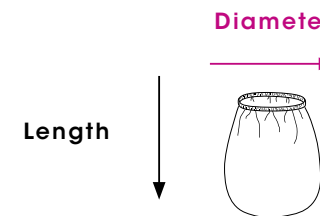

# Ensuring patient safety through equipment protection is paramount. The ongoing battle against nosocomial infections remains a significant challenge

Krystal equipment drapes act as a sterile physical barrier to protect patients and devices from cross-contamination in the operating room and cath lab.

# C-arm Covers

EDM offers a wide range of medical protective covers designed for use in the operating room. Easy to use and compliant with CE standards, they ensure quality, safety, and efficiency.

**40%**  
of medical equipment  
is damaged

**Extending the lifespan  
of equipment**

... during surgical procedures, which expose it to various factors such as impacts, body fluids, and disinfectants.

**Saving on replacement costs**

Damage to equipment can lead to high repair expenses or even complete replacement, representing a financial burden for healthcare facilities.

**Preventing contamination**

By protecting equipment from contaminants, the risk of spreading healthcare-associated infections is reduced, thereby contributing to patient safety and compliance with health standards.

# Endoscope Transport and Short Term Storage Covers

**Instruction No. DGOS/PF2/DGS/VSS1/2016/220 dated 4 July 2016 concerning the processing of heat-sensitive flexible endoscopes with channels within healthcare facilities.**

“The organization, regardless of the type of facility, requires the implementation of an on-call system to ensure the processing of endoscopes by trained personnel, **satisfactory conditions for transporting the equipment**, means to distinguish between clean and **contaminated items**, and the shortest possible turnaround time for handling endoscopes, in accordance with a written procedure.”

“The equipment, labeled as ‘**contaminated**’, is then immediately transported to the dedicated endoscope processing area, where the following steps take place.”

## Transportation and short term storage of endoscopes

**ETC-5242 Covers,  
The ideal solution for
